

Case Study-IP Surveillance

SkyNet is pleased to share our recent success an IP Surveillance deployment that drastically changed our customer business practice.

The Challenge ...

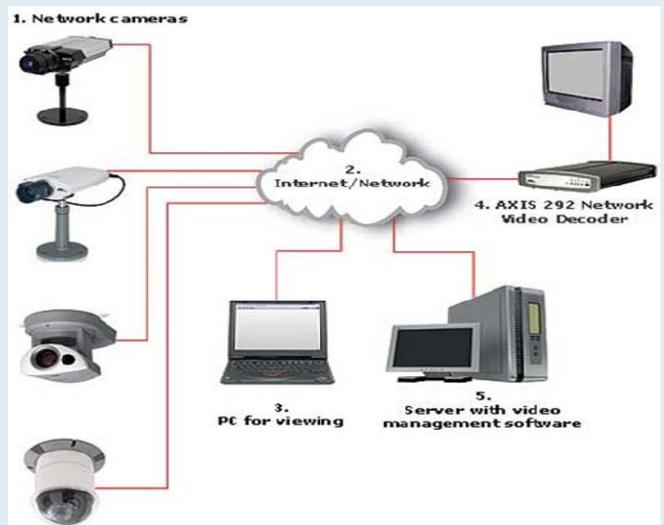

Our customer is a warehousing and logistics facility in the Toronto area.

They came to us with a problem that is not uncommon. They wanted to reduce on-going theft and capture evidence of incidental property damage from delivery trucks to their warehouse bays.

Summary of pain points ...

- Increased leakage costs
- Decreasing productivity
- Costly damages
- 24X7 facility with 9X5 monitoring

IP Surveillance Solution

The Solution ...

By designing and installing an IP Surveillance Solution, SkyNet was able to provide the customer with a robust solution that matched his needs, and deliver this solution on time and on budget. A system was designed that included a central monitoring station, 12 IP cameras, motion detection, PoE for emergencies, centralized storage, PTZ functionality, triggers on specific areas, event notification, and remote monitoring and management. Within 30 days of installation productivity was increased by 15%, leakage was decreased drastically, and the company was able to claim over \$7000 in damages resulting from delivery truck incidents. ROI analysis put the payback for this solution at approximately 6 months.

Technology Overview ...

Capacity - Centralized storage allows for efficient storage and retrieval of video. Video files are stored and searchable by date and recycled in time intervals that are user set.

Security - Increased security with IP based surveillance equipment for ease of integration into your IT environment. Increased productivity and decreased losses are the result with this powerful solution that can be managed from any internet connection.

Interoperability - with full integration into your IT network, this solution is robust, effective, and fully scalable to grow with your needs. Event triggers, door triggers, motion and sound activation, and notifications to you, make this solution fully customizable.

Special points of interest:

- IP Surveillance Solution
- Warehousing and Logistics
- Centralized Storage
- Power over Ethernet for redundancy
- Remote monitoring and management capabilities
- Highly Scalable
- Increased Productivity and Decreased Costs
